

FULL – DOSE ANAPOLON

Concentration ____ 50mg/Tablet

Route of A. _____ Oral

Schedule _____ CIII - Rx Only

Form _____ Tablet

Norwick

Anapolon is an oral medicinal product containing 50 mg of oxymetholone in each tablet. Oxymetholone is a synthetic anabolic-androgenic steroid with both anabolic and androgenic pharmacological activity.

Oxymetholone may stimulate erythropoietin production and support erythropoiesis in certain forms of anemia associated with deficient red blood cell production. It also influences protein metabolism and nitrogen retention; however, these effects may vary according to nutritional status, dosage, treatment duration, and individual clinical response.

As a 17-alpha-alkylated androgen, oxymetholone may be associated with clinically significant hepatic, metabolic, endocrine, lipid, and hematological effects. Treatment should therefore be based on an individual medical assessment and accompanied by appropriate clinical and laboratory monitoring, including periodic evaluation of liver function, blood parameters, and serum lipid levels.

Anapolon should be used only under the supervision of a qualified healthcare professional. It is not intended for unsupervised use or for non-medical performance enhancement.

**KEEP OUT OF REACH OF CHILDREN
STORE TABLET IN COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)**

**PROTECT TABLET FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL**
