

10mL MULTI-DOSE VIAL DROSTANOLONE PROPIONATE

Concentration	100mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Drostanolone Propionate is an esterified form of drostanolone, also known as dromostanolone, a synthetic anabolic-androgenic steroid structurally derived from dihydrotestosterone. The propionate ester is formulated for intramuscular administration and supports gradual release of the active compound from the injection site following enzymatic cleavage of the ester bond.

After release, drostanolone interacts with androgen receptors and influences androgen-responsive biological processes, including protein metabolism and nitrogen retention. The nature and intensity of its pharmacological effects may vary according to the administered amount, duration of exposure, individual sensitivity, underlying health status, and concomitant treatments.

Drostanolone Propionate was historically used and investigated as an antineoplastic androgen in selected cases of breast cancer. Its clinical usefulness was limited by androgenic and virilizing effects, and it has subsequently been removed from routine medicinal use in many jurisdictions. Its current authorization status should therefore be verified according to the applicable national regulations and approved prescribing information.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL
