|---------------|----------------|
| Concentration | 200mg/ml       |
| Route of A.   | Intramuscular  |
| Schedule      | CIII - Rx Only |
| Form          | Injectable     |

Nandrolone Decanoate is an injectable anabolic-androgenic steroid containing the decanoate ester of nandrolone, a synthetic derivative of testosterone. It is formulated as an oil-based solution for intramuscular administration. The esterified structure supports gradual release of the active compound from the injection site and extended systemic exposure.

Nandrolone Decanoate exhibits both anabolic and androgenic pharmacological activity. These effects cannot be completely separated and may influence protein metabolism, endocrine function, hematological parameters, and androgen-responsive tissues. The nature and intensity of the response may vary according to individual sensitivity, treatment duration, underlying health status, and concomitant therapies.

Nandrolone Decanoate has been used in selected clinical settings for the management of anemia associated with renal insufficiency and may increase hemoglobin concentration and red blood cell mass. Approved indications and prescribing conditions may vary between jurisdictions and should be verified according to the applicable product licence and national regulations.

KEEP OUT OF REACH OF CHILDREN  
STORE INJECTION IN A COOL,  
DRY PLACE BETWEEN 15-25°C (59-77°F)

PROTECT INJECTION FROM LIGHT AND  
MOISTURE USE TABLET ONLY AS DIRECTED  
BY A HEALTHCARE PROFESSIONAL
