

10mL MULTI-DOSE VIAL PRIMOBOLAN DEPOT

Concentration	100mg/ml
Route of A.	Intramuscular
Schedule	CIII - Rx Only
Form	Injectable

Primobolan Depot is an injectable preparation containing methenolone enanthate, an esterified anabolic-androgenic steroid. Methenolone enanthate is also referred to as metenolone enanthate in certain pharmaceutical and scientific sources. The enanthate ester is used in intramuscular depot formulations to support gradual release of the active compound from the injection site and prolonged systemic availability.

Following enzymatic cleavage of the ester bond, methenolone interacts with androgen receptors and may influence androgen-responsive processes, including protein metabolism, nitrogen retention, endocrine function, and hematological parameters. The nature and intensity of these effects may vary according to individual sensitivity, duration of exposure, underlying health status, and concomitant treatments.

Methenolone Enanthate has historically been associated with selected therapeutic applications, including certain forms of aplastic anemia. However, its current authorization, approved indications, and prescribing conditions vary between jurisdictions. The presence of the substance in pharmaceutical identity databases does not itself indicate regulatory approval.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15-25°C (59-77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL
