

10mL MULTI-DOSE VIAL **SUSTANON DEPOT**

Concentration	400mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Sustanon Depot 400 is an oil-based injectable preparation containing four esterified forms of testosterone with different release characteristics. Each millilitre contains Testosterone Propionate, Testosterone Phenylpropionate, Testosterone Isocaproate, and Testosterone Decanoate, providing a total concentration of 400 mg of testosterone esters.

Following intramuscular administration, the individual esters are gradually released from the injection site and converted into active testosterone through enzymatic cleavage. Their different ester-chain characteristics contribute to a combined release profile, while the resulting testosterone interacts with androgen receptors in androgen-responsive tissues.

Testosterone influences physiological processes associated with male sexual development, reproductive function, protein metabolism, bone maintenance, body composition, and red blood cell production. The clinical response may vary according to individual sensitivity, underlying health status, treatment duration, and other therapies administered concurrently.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
