

10mL MULTI-DOSE VIAL TESTESTERONE BASE

Concentration	100mg/ml
Route of A.	Intramuscular
Schedule	CIII - Rx Only
Form	Injectable

Testosterone Base is an injectable preparation containing non-esterified testosterone. Unlike esterified testosterone compounds, the active substance is present in its free form and does not require enzymatic cleavage of an ester bond before interacting with androgen receptors. The release and absorption characteristics of the product depend on its pharmaceutical formulation and method of administration.

Testosterone is a naturally occurring androgenic hormone that contributes to the development and maintenance of male reproductive tissues and secondary sexual characteristics. It also influences protein metabolism, bone tissue, body composition, sexual function, and red blood cell production through its activity in androgen-responsive tissues.

Testosterone products may be used as replacement therapy in selected male patients whose testosterone deficiency has been confirmed through compatible clinical findings and appropriate laboratory testing. Approved indications, formulations, and treatment conditions vary between jurisdictions and must be determined according to the applicable product licence and prescribing information.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15-25°C (59-77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
