

10mL MULTI-DOSE VIAL TESTESTERONE ENANTHATE

Concentration	250mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Norwick

Testosterone Enanthate is an esterified derivative of testosterone formulated as an oil-based solution for intramuscular administration. Esterification prolongs the activity of testosterone and supports gradual absorption of the active compound from the injection site. Following enzymatic hydrolysis of the ester bond, free testosterone becomes available to interact with androgen receptors in responsive tissues.

Testosterone is a naturally occurring androgen involved in the development and maintenance of male reproductive tissues and secondary sexual characteristics. It also influences protein metabolism, bone tissue, body composition, sexual function, nitrogen balance, and red blood cell production.

Testosterone Enanthate may be used as replacement therapy in selected male patients with clinically and biochemically confirmed deficiency or absence of endogenous testosterone. The diagnosis, indication, treatment conditions, and monitoring requirements should be determined through individual medical assessment and according to the approved prescribing information of the intended market. Its safety and effectiveness for testosterone reduction associated solely with ageing have not been established.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL

ACCREDITED
