

10mL MULTI-DOSE VIAL TESTESTERONE PROPIONATE

Concentration	100mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Testosterone Propionate is an esterified form of testosterone formulated for intramuscular administration. Testosterone is a naturally occurring androgenic hormone, while the propionate ester modifies its absorption and release profile following injection. Compared with longer-chain testosterone esters, testosterone propionate has a relatively shorter duration of action and should not be considered interchangeable with them.

Following enzymatic cleavage of the ester bond, testosterone interacts with androgen receptors and influences androgen-responsive tissues and physiological processes. Its pharmacological activity includes effects on male sexual development, reproductive function, protein metabolism, bone tissue, hematopoiesis, and other androgen-dependent systems.

Testosterone preparations may be used as replacement therapy in selected male patients with clinically and biochemically confirmed testosterone deficiency. The indication, formulation, and treatment conditions must be determined according to the applicable product licence, national regulations, and individual medical assessment.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
