

10mL MULTI-DOSE VIAL TRENBOLONE ACETATE

Concentration	100mg/ml
Route of A.	Intramuscular
Schedule	CIII - Rx Only
Form	Injectable

Trenbolone Acetate is an esterified synthetic anabolic-androgenic steroid. In an oil-based intramuscular formulation, the acetate ester influences the absorption and release profile of the active compound. Following enzymatic cleavage of the ester bond, trenbolone becomes available to interact with androgen receptors in androgen-responsive tissues.

Trenbolone may influence protein metabolism, nitrogen retention, endocrine function, and other androgen-responsive biological processes. The nature and intensity of its pharmacological effects may vary according to individual sensitivity, duration of exposure, underlying health status, and concomitant substances.

Trenbolone Acetate has primarily been used in veterinary medicine. The FDA lists approved cattle implants containing trenbolone acetate, alone or in combination with estrogenic compounds, for specific growth-related veterinary indications. These approvals do not represent authorization of trenbolone acetate as an injectable medicinal product for human treatment.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15-25°C (59-77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL
