

10mL MULTI-DOSE VIAL TRENBOLONE ENANTHATE

Concentration	200mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Trenbolone Enanthate is an esterified form of trenbolone, a synthetic anabolic-androgenic steroid. The enanthate ester modifies the release profile of the active compound and, when formulated for intramuscular administration, supports gradual release from the injection site and prolonged systemic exposure. Following enzymatic cleavage of the ester bond, free trenbolone becomes available to interact with androgen receptors in responsive tissues.

Trenbolone may influence androgen-responsive biological processes, including protein metabolism, nitrogen retention, endocrine function, and hematological parameters. The nature and intensity of its pharmacological effects may vary according to individual sensitivity, duration of exposure, underlying health status, and concomitant substances.

Current FDA sources document veterinary cattle implants containing trenbolone acetate, alone or in combination with estrogenic compounds. These veterinary approvals do not constitute authorization of Trenbolone Enanthate as an injectable medicinal product for human treatment. Its regulatory and approved-use status should therefore be verified according to the applicable national legislation and product licence.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL
