

10mL MULTI-DOSE VIAL

WINSTROL DEPOT

Concentration	100mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Winstrol Depot is an injectable suspension containing stanozolol, a synthetic anabolic-androgenic steroid with both anabolic and androgenic pharmacological activity. Unlike esterified injectable steroids, stanozolol is present as the active compound itself. Its absorption and release characteristics depend on the suspension formulation and the method of administration.

Stanozolol interacts with androgen receptors and may influence androgen-responsive biological processes, including protein metabolism, nitrogen retention, endocrine function, and hematological parameters. The nature and intensity of these effects may vary according to individual sensitivity, duration of exposure, underlying health status, and concomitant substances.

Stanozolol sterile suspension has historically been associated with veterinary medicinal use. Current FDA animal-drug records list Winstrol-V Sterile Suspension as a stanozolol-containing veterinary product; this listing does not constitute authorization of Winstrol Depot as an injectable medicinal product for human treatment. Regulatory and approved-use status must therefore be verified according to the applicable national legislation and product licence.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL
