

10mL MULTI-DOSE VIAL DROSTANOLONE ENANTHATE

Concentration	200mg/ml
Route of A.	Intramuscular
Schedule	CIII – Rx Only
Form	Injectable

Drostanolone Enanthate is a long-acting esterified form of drostanolone, also known as dromostanolone. Drostanolone is a synthetic anabolic-androgenic steroid structurally derived from dihydrotestosterone. The enanthate ester is used in oil-based intramuscular formulations to support gradual release of the active compound from the injection site and prolonged systemic exposure.

Following enzymatic cleavage of the ester, drostanolone interacts with androgen receptors and may influence androgen-responsive biological processes, including protein metabolism and nitrogen retention. The nature and intensity of its pharmacological effects may vary according to the administered amount, duration of exposure, individual sensitivity, underlying health status, and concomitant substances.

As an anabolic-androgenic agent, Drostanolone Enanthate may affect endocrine function, lipid metabolism, cardiovascular parameters, hepatic function, and hematological values. Its use therefore requires qualified medical assessment together with appropriate clinical and laboratory monitoring.

KEEP OUT OF REACH OF CHILDREN
STORE INJECTION IN A COOL,
DRY PLACE BETWEEN 15–25°C (59–77°F)

PROTECT INJECTION FROM LIGHT AND
MOISTURE USE TABLET ONLY AS DIRECTED
BY A HEALTHCARE PROFESSIONAL
